### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohsuga et al in view of Gorille et al (GB 2070782). Ohsuga et al discloses a fuel injection control system having airflow sensor 3 downstream of the throttle valve. During the air intake stroke, the control system calculates injection quantity at regular intervals to match the airflow so that the mixture is accurately controlled, column 5, lines 46-66. An integral value of airflow is not used for the fuel calculation. Gorille et al teaches integrating an airflow signal during an intake stroke to accurately match the signal to the actual air amount. It would have been obvious to one with ordinary skill in the art at the time the invention was made to modify Ohsuga et al to use an integrated value of the airflow signal to determine fuel injection amount, as taught by Gorille et al, to provide a more accurate determination of actual airflow and a corresponding increase of fuel injection metering accuracy.

### ***Allowable Subject Matter***

Claims 1 and 2 are allowed.

### ***Conclusion***

The fuel injection control systems made of record and not relied upon are considered pertinent to applicant's disclosure.
